

## **Knovel Offer**

**7/20/06**

As far as what we can offer the member schools by way of discounts, we can offer an across the board 25% discount on list pricing for all interested parties. Additionally, any member schools that are currently subscribers, we can offer the same discounts on any added content they may wish to subscribe to (as well as renewing their subscriptions to Knovel through ESIG). We base our pricing on the number of end users in the applied fields (Science/Engineering) and then group them in tiers of 1 through 5 (5 being the highest number of users). We have additional flexibility in pricing due to these classifications, we can work together with the interested schools to come up with pricing that fits within the school's budgets and doesn't disrupt the integrity of our pricing.

Knovel offers an online, aggregated collection of over 800 science/engineering reference titles. Some of our publishing partners are Elsevier, Wiley, Springer, and McGraw Hill. What separates Knovel from any other online database, is the functionality software that we have embedded into the reference books, helping students find data faster and apply it more productively

The Library is a dynamic collection, with 12-15 titles added each month. Titles are added based on end user recommendations, which means you help shape the product that you want.

Academic accounts are *completely unlocked accounts*, meaning any number of Neline/ESIG end users can use the site concurrently. We use IP recognition for all campuses, as well as any proxy server access the University may use

Knovel offers *Free MARC records* through OCLC. We incur any and all costs associated with delivery of these records to the University

Free onsite and Webex training sessions. Knovel also generates monthly activity reports to show you how often the site is being used and what areas of interest are drawing the most interest from the community  
Some titles of interest in specific fields are:

### **Life Sciences/Chemistry**

Food Chemicals Codex  
Wiley Encyclopedia of Molecular Medicine  
Perry's Chemical Engineer's Handbook  
Patty's Toxicology  
Lange's Handbook of Chemistry  
Springer Handbook of Nanotechnology

## **Engineering**

Mark's Standard Handbook for Mechanical Engineers  
Machinery's Handbook  
Roark's Formulas for Stress and Strain  
Energy Efficiency Manual  
ASME Boiler and Pressure Vessel Code

## **Materials**

Aluminum Alloy Database  
Corrosion Survey Database (COR-SUR)  
Smithell's Metals Reference Book  
Landolt Bornstein, Group IV Physical Chemistry  
Injection Molding Handbook
